

ML910™ Rugged Notebook

Power, versatility, and connectivity – with you everywhere

“There is so much information coming over that notebook that we weren’t getting by voice. It makes a huge difference in the quality of our responses.”

***Peter Mango
Chief of Police
East Fallowfield Township, Pennsylvania***

Whether it's a suspect's photo, real-time processing of scanned license plates, or shared video from a unit at the scene of an incident, making the best use of the data requires capable, powerful communications tools in the hands of users. Public safety personnel need quick, reliable access to mission-critical information, often in extreme conditions. The ML910™ Rugged Notebook was designed with this in mind. It is powerful, visual, connected – and tough.

More Power

The ML910 Rugged Notebook provides plenty of processing power to handle anything from on-the-fly data compression to displaying multiple windows of streaming video. Its Intel® Core™ Duo processor and ATI Mobility Radeon™ X1400 graphics processor work together to ensure your notebook can handle any data you give it – with plenty of headroom for future applications.

More Visual

When you need to see it, the ML910 notebook will display it with unequalled clarity. With an industry leading display resolution and size, it brings you visual capabilities unmatched by other rugged notebooks. Its 13.3" widescreen display provides you with more space to view multiple applications. The display is readable even in direct sunlight, and the included video capture card provides connectivity to mobile video applications such as Automatic License Plate Recognition, Mobile Video Sharing, and DigitalPatroller® DP-2.

More Connected

A fast, reliable data connection is a force multiplier. Responders can stay in the field instead of returning to file reports or get information, and richer data allows for a more effective strategy from commanders and better response from personnel on scene.

The ML910 Rugged Notebook is optimized by design for wireless. With connections to public and private networks, as well as WiFi and GPS, the ML910 Rugged Notebook will stay connected where less capable notebooks and laptops give up.

Even Tougher

It may look like an ordinary laptop, but the ML910 Rugged Notebook is no desk jockey. Designed from the ground up to be at your side on the toughest assignments, this notebook is ruggedized per U.S. Military Standard 810F to withstand sand, water, dust, temperature extremes, and vibrations. Whether it's in driving rain, falling snow, a dust storm – or in bright sunlight – the ML910 Rugged Notebook will bring you the information you need, no excuses.

More Secure

Considering the importance and sensitivity of information carried by public safety personnel, securing this data is vital. That's why the ML910 Rugged Notebook offers multiple security options. The included TPM chip encrypts your data and helps keep it safe, while the built-in fingerprint scanner tightly controls access without the hassle and security shortcomings of passwords. Smart card support is also available.

"Officers can file reports right from their cars where they used to go back to the station and take hours off patrol. This has [allowed] police departments to upgrade their visibility while maintaining the workload."

*John Haynes,
Deputy Director for 911 Operations
Chester County, Pennsylvania*

Designed to stand up to almost any environment

ML910 Rugged Notebook

- Fully rugged to tolerate water, dust, and sand (U.S. Military Spec 810F)
- High Brightness (500 NIT) screen
- Incorporates Intel Core Duo processors
- Optional embedded 3G cellular broadband modems
- Advanced security features, including smart card support, TPM version 1.2, and built-in 500 DPI+ Fingerprint scanner
- Dedicated Video Processor and Video Memory for faster screen updates
- Indoor/Outdoor capability
- Connects to private data networks, including DataTAC and MOTOMESH (using optional PC card)
- Supports public wireless broadband, including 3G cellular (using optional PC card)
- Optional built-in GPS
- 30% more pixels than a non-wide 13.3" screen
- Motorola Service and Support

Part of MOTOA4™ Mission Critical Portfolio

The Motorola ML910 Rugged Notebook is part of the MOTOA4 Mission Critical portfolio of products — putting real-time information in the hands of public safety personnel, in virtually any environment. It's technology that's second nature™.
